

1.0 PURPOSE

In this Policy, we aim to continuously improve our energy management system by identifying our energy consumption points in the activities carried out by Naturel Holding and its Subsidiaries.

2.0 SCOPE

This policy covers the energy efficiency management principles of Naturel Holding and its Subsidiaries.

3.0 PRINCIPLES and APPLICATIONS

We are committed to:

- Continuously improve our activities in the climate technologies sector.
- Prioritizing energy efficiency in every new investment within the climate technologies sector.
- Keeping our Corporate Values, which include Sustainability, Transparency, Accountability, Equality and Inclusion, and Innovation and Collaborations, at the core of our focus on energy efficiency in all our activities.
- Creating an energy efficiency inventory and to developing and maintaining the "Energy Efficiency Management and Monitoring System" with the support of artificial intelligence, as a result of the importance we attach to our innovation value.
- Complying with the conditions determined by external legal contexts regarding the efficient use of energy and energy efficiency.
- Supporting a low carbon economy and increase energy efficiency, considering national and international standards within the scope of biodiversity and climate change.
- Ensuring that all end-to-end steps taken for efficient energy, which directly affect energy efficiency, are sustainable throughout the journey of product and service production from design to supply.
- Reducing consumption by making the energy used in work areas (heating, cooling, lighting, transportation) efficient.
- Contributing to the world's renewable energy capacity with the EPC services we provide to support energy efficiency on a global scale.
- Continuing investments in energy storage technologies to make the use of renewable energy permanent.
- Raising awareness among our employees, suppliers and all external stakeholders about energy efficiency and maintaining the sustainability of this understanding.
